$\qquad$

Describe the likelihood of an event as impossible，unlikely，equally likely，likely or certain．
1．The school chess club wins $\frac{7}{8}$ of the time． $\qquad$
2．The Cincinatti Bengals win $50 \%$ of their home games． $\qquad$
3．There is a $30 \%$ chance it will rain overnight $\qquad$
4．The probability that you will have to retake Math 7 is 0 ． $\qquad$
Find each theoretical probability as a FRACTION in SIMPLEST FORM，if you roll a standard number cube．
5．$P(\operatorname{not} 3)=$ $\qquad$ 6．$P(2,4$, or 5$)=$ $\qquad$ 7．$P(8)=$ $\qquad$
8．$P(\underline{1})=$ $\qquad$
9．$P($ Even number $)=$ $\qquad$
10．$P(>5)=$ $\qquad$

Suppose a number cube is rolled 240 times．About how many times should each event occur？
11．You roll a 1,2 or 3 ．
12．A 4 is rolled．

Find the experimental probability of each event based off of counting a bag of M\＆Ms（Fractions！）

| colors | red | blue | green | brown | yellow |
| :---: | :---: | :---: | :---: | :---: | :---: |
| \＃of M\＆Ms | 14 | 0 | 17 | 12 | 7 |

13．$\quad \mathrm{P}($ Yellow $)=$ $\qquad$
14． $\mathrm{P}($ Not Blue $)=$ $\qquad$

15．$P($ brown or Red $)=$ $\qquad$

A bag of marbles contains： 50 green， 12 blue， 2 yellow， 10 purple and 10 red．Write each answer as a DECIMAL．
$\qquad$
16． $\mathrm{P}($ blue $)=$
17．$P($ not red $)=$ $\qquad$ 18． $\mathrm{P}($ green $)=$ $\qquad$

|  | $88^{\circ}=(\text { pas 10u）})^{\prime} \cdot L I$ |  |  |  |  |
