

Review

Fill in the table below.

1.

Ratio (Fraction)	Decimal	Percent
$\frac{3}{5}$	0.6	60%
$\frac{6}{100} = \frac{3}{50}$	0.06	6%
$\frac{35}{100} = \frac{7}{20}$	0.35	35%

Answer the following.

2. In Bob's closet, there are 10 shirts and 4 pants.

a. What is the ratio of shirts to pants?

$$\frac{10}{4} = \frac{5}{2}$$

b. What is the ratio of shirts to total items?

$$\frac{10}{14} = \frac{5}{7}$$

c. What percent of the items in the closet are shirts?

$$\frac{10}{14} = 0.7142 = \boxed{71.42\%}$$

The following is proportional. Fill in the missing table, equation, and verbal.

3. Verbal: Mr. Sullivan makes 3 Insta posts every 5 days.

Table

Time (days)	Insta Posts (#)
5	3
2	$\frac{6}{5} = 1.2$
10	6
15	9

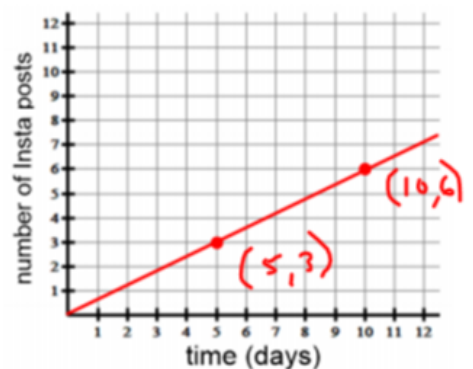

Equation

$$k = \frac{3}{5}$$

Write the equation.

$$y = \frac{3}{5}x$$

Graph

For questions 4-7, use the equation $y = \frac{5}{4}x$

4. Find y when $x = 8$

$$y = \frac{5}{4}(8)$$

$$y = 10$$

5. Find x when $y = -20$

$$(4) -20 = \frac{5}{4}x (4)$$

$$-80 = \frac{5x}{4}$$

$$-16 = x$$

6. Fill in the table

x	y
-12	-15
2	$\frac{5}{2}$ or 2.5
$\frac{24}{5}$ or 4.8	6
-16	-20

$$6 = \frac{5}{4}x \quad -20 = \frac{5}{4}x$$

$$x = \frac{24}{5} \quad x = -16$$

7. Is the equation proportional? YES or NO

8. Mr. Brust and Mr. Kelly are filling up their hot tubs.

BRUST

Mr Brust pumps in 6 gallons of water every 2 minutes.

KELLY

Mr. Kelly already has 8 gallons of water in his hot tub, he pumps in 2 gallons of water every minute.

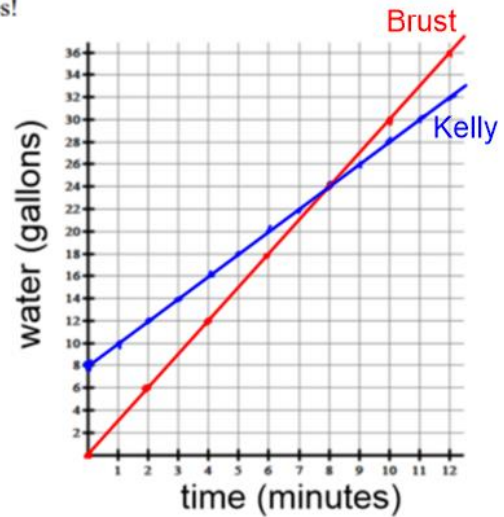

a. Complete the tables and graph each relationship. Label your lines!

BRUST

Time (minutes)	Water (gallons)
0	0
1	3
2	6
3	9
4	12
5	15
10	30

KELLY

Time (minutes)	Water (gallons)
0	8
1	10
2	12
3	14
4	16
5	18
10	28

b. Are the relationships proportional? Explain why or why not.

Is BRUST proportional = Yes or No

Is KELLY proportional = Yes or No

Straight line through the origin

Straight line through but does not contain the origin

c. If they are proportional, write an equation to represent the situation.

$$y = 3x$$

not proportional

d. How much water will Mr. Brust's hot tub have in 12 minutes? Use your equation.

$$y = 3(12)$$

$$y = 36 \text{ gallons}$$

e. How long will it take for Mr. Brust's hot tub to have 120 gallons of water? Use your equation.

$$\frac{120}{3} = \frac{3x}{3}$$

$$40 = x$$

$$40 \text{ minutes}$$

f. **CHALLENGE** Mr. Kelly's hot tub holds a total of 2,040 gallons of water. He wants to use the tub in exactly one day from now. Will his hot tub be full? Show work to support your answer.

1 day = 24 hours
 $24(60) = 1440$ minutes
 1 day is 1440 minutes

$$y = 2x + 8$$

$$2040 = 2x + 8$$

$$\begin{array}{r} 2040 \\ -8 \\ \hline 2032 \end{array} = \frac{2x}{2}$$

$$1016 = x$$

it will take 1016 minutes to fill

yes, one day is 1440 minutes, it will take 1016 minutes to fill up 2040 gallons.
